

SoftWord - back to traditional games with social interaction, challenging and exciting!

Our 3 level set of games focuses on developing vocabulary through memory and matching. The vocabulary is based on children's natural language development. The topics include colors, animals, nouns, verbs, and adjectives. The drawings are hand painted and catch the child's attention and interest.

Level one - picture - picture match

Level two - picture - written word match

Level three - threesome matching of 2 pictures and a written word. The third level is very challenging and exciting. It allows for more complicated game play like blocking and swapping that challenges the memory even more.

YoungSoftRead - for pre-school & kindergarten

The perfect method to teach reading in a unique way preventing any **dyslexic** confusion or obstacles!

YoungSoftRead teaches the reading technique by using symbols, which introduce all of the letters and their sounds. The learner decodes the symbols and then the letters and converts them into sounds and immediately connects them into units of sounds i.e. syllables.

This program also practices writing and new vocabulary (for non-native speakers) is introduced as more sounds/letters are acquired.

Native speakers of English also practice reading of "non-sense" words to focus on and implement the technique of reading rather than capturing whole words as a visual picture (global reading).

This special method ensures accurate reading without any **dyslexic** confusion.

YoungSoftRead offers a very large range of tasks (circling, coloring, highlighting, sorting, completing, copying, comparing and filling in blanks). It is suitable for independent learning as well.

AdvancedSoftRead - all reading/writing patterns

Introduces and explains all the reading/writing patterns of English in a logical and friendly way and practices them through varied activities like circling, highlighting, completing, copying, and reading. All of which is accompanied by colorful illustrations.

Again, this method prevents any **dyslexic** confusion and ensures fluent reading and spelling.
